POST

During recent safety inspections at City of Las Vegas' facilities, it has been noted that bottles containing chemical solutions are not being labeled.

Safety Policy/Procedure No. 87-2, Hazard Communication, "requires that all containers be labeled with the product name and the specific hazard, i.e., **Danger – Flammable, Caution – Combustible, or Warning – Eye Irritant.**"

Insurance Services is working with Central Stores to obtain adhesive labels from the various suppliers.

Until a sufficient supply of labels can be obtained, it is requested that containers be labeled with the product name by using a permanent marker directly on the bottles.
